SUMMARY

Software Engineer with 5+ years of experience shipping backend systems, mobile apps, and applied ML products for remote teams. Strong in Python and TypeScript across REST APIs, microservices (gRPC, Kafka), PostgreSQL, Redis, and Docker. Recent work spans health-tech MVPs (Clinsight, GlycoBuddy), multi-agent legal document analysis, and computer-vision meal classification. HNG14 backend track finalist.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, Bash, C

Backend & APIs: FastAPI, Django, NestJS, REST, gRPC, Kafka, JWT, RBAC, SSE

Frontend & Mobile: Next.js, React, React Native, Expo, Tailwind CSS, TanStack Query

Machine Learning: PyTorch, Scikit-learn, LangGraph, Google Gemini/OpenAI/DeepSeek/Ollama API

Data & Storage: PostgreSQL, MongoDB, Redis, MySQL, object storage (S3 / MinIO)

Infrastructure: Docker, Kubernetes, AWS (EC2, S3, Lambda), GitHub Actions, CI/CD, ARQ background workers

Practices: Layered architecture, ADRs, Agile, conventional commits, OWASP-aware API design

PROFESSIONAL EXPERIENCE

HNG Internship | Remote

Backend Track (Finalist) | Apr – Jun 2026

- Built a distributed job scheduler (FastAPI, Redis, Next.js) with heap and timing-wheel scheduling, DAG workflows, dead-letter queue retry, SSE updates, and independent worker processes.
- Delivered backend features for Clinsight (health-tech MVP): guest session management, signup data migration, lab upload processing, and async notification flows.
- Wrote architecture decision records and design docs covering system topology, data flow, and trade-offs.
- Designed PostgreSQL schemas with indexing and query tuning for concurrent load.
- Implemented secure REST APIs with JWT auth, RBAC, and input validation.
- Improved CI/CD and local dev setup by adopting uv, reducing dependency resolution and container build times.
- Worked in an Agile GitHub workflow: feature branches, code review, merge conflict resolution, and conventional commits.

Dowell Research | Singapore (Remote)

Software Engineer | 2023 – 2026

- Built and maintained full-stack products, including responsive user interfaces and REST APIs serving 10,000+ daily requests at 99.9% uptime (Django, Node.js).
- Improved database query performance by 40% through a dedicated internal metadata API.
- Cut deployment time by 60% with Docker-based CI/CD on VPS infrastructure.

FlexiSaf | Nigeria (Remote)

Software Engineering Intern | Jan – Apr 2026

- Completed internship with certification; delivered capstone systems including a predictive web app (Scikit-learn, Streamlit) and Python pipelines for image and text processing.
- Built CNN+LSTM image captioning and transfer-learning models (ResNet50, PyTorch) as part of the GenAI & Data Science track.
- Built and deployed interactive dashboards and backend logic for student-facing tools used in production demos.

OrbitalsAI | Nigeria

Django Backend Developer | 2023 – 2024

- Reduced inference pipeline latency by 45% using gRPC-based backend services.
- Maintained 99.8% production uptime through resilient deployment and monitoring practices.
- Shortened frontend-backend integration cycles by 30% by standardizing API contracts and data flow.

SELECTED PROJECTS

1 - GlycoBuddy · Founder & Lead Engineer glycobuddy.com

Diabetes meal intelligence platform for Nigerian cuisine — photo-based meal scans, glycemic guidance, meal planning, and an AI nutrition coach.

- Architected v2 full stack: FastAPI backend (PostgreSQL, Redis, ARQ workers, S3/MinIO) and Expo / React Native mobile app (TypeScript, NativeWind, TanStack Query).
- Built a hybrid scan pipeline: fine-tuned OpenCLIP (ViT-B-32) classifies 24 Nigerian dishes locally (CPU/GPU); Google Gemini returns structured nutrition JSON (GI score, macros, portion guidance) with a Gemini-only fallback when CLIP is unavailable.
- Implemented LangGraph workflows for meal-plan generation and streaming AI coach chat (SSE) with context from user profile, scan history, and recipe data.
- Shipped guest mode with daily quotas, OAuth (Google/Apple PKCE), subscription tiers, admin analytics dashboard, and health-tip content management.
- Designed layered backend (API → services → repositories) with async SQLAlchemy, background jobs, and swap-ready storage/email providers for production deploy.

2 - Clinsight · Team Product - clinsight.hng14.com

A platform that turns lab reports into plain-language summaries for patients.

- Backend engineer on the team MVP: guest sessions, account migration on signup, upload/OCR processing pipelines, async notifications.

Stack: FastAPI, PostgreSQL, REST APIs

3 - HNG Background Job Scheduler · Individual Capstone

Production-style job scheduler with priority queues, workflow DAGs, DLQ retry, and live SSE dashboard.

Stack: FastAPI, Redis, Next.js, Docker

4 - LawFirm Pro · Microservices Platform

Legal practice management platform with client booking, payments, and case records.

- Designed NestJS microservices with gRPC for synchronous service calls and Kafka for async notifications and activity logging.
- Built Next.js frontend with secure email-based accounts and client data management.

Stack: NestJS, Kafka, gRPC, PostgreSQL, Next.js

5 - LegalCouncil AI · Multi-Agent Legal Analysis Platform

Production-style legal document intelligence for Nigerian law — multi-service backend with agentic analysis pipeline.

- Architected FastAPI monorepo (8 services): API gateway, auth, user/org, document, Presidio PII, analysis, billing (Stripe), and notifications — gRPC inter-service calls, Kafka event bus, PostgreSQL, Redis, MinIO.
- Built LangGraph workflow (Parser → Researcher → Risk Analyzer → Drafter): Docling PDF extraction, Presidio anonymization, ChromaDB RAG per tenant, structured risk JSON, and executive summaries.
- Supports Ollama, DeepSeek, and OpenAI with provider fallback; SSE job progress streaming and Kafka-triggered auto-analysis on document upload.

Stack: FastAPI, LangGraph, ChromaDB, Kafka, gRPC, Presidio, Docling, PostgreSQL, Docker

6 - MIBTech AI Studio · Image Processing SaaS

Background removal service with non-blocking API and cloud storage.

- FastAPI backend, Redis task queue for heavy jobs, AWS S3 with lifecycle policies; Next.js 15 client.

Stack: FastAPI, Redis, AWS S3, Docker · github.com/Goldeno10/Image_Background_Remover

EDUCATION & CERTIFICATIONS

- **HNG Internship** — Backend Engineering Track (Finalist) — HNG Tech · Completed Jun 2026
- **Generative AI & Data Science Internship** — FlexiSaf Edusoft · Completed Apr 2026
- **B.Eng. Computer Engineering** — Ahmadu Bello University, Zaria · 2018 – 2024
- **Software Engineering Certification** — ALX Africa · 2023 – 2024
- **Huawei Certified Cloud Developer Associate (HCCDA)** — AI, and Tech Essentials · 2024
